Summary of Qualifications

Software Engineer with strong C/C++, Python, and systems-level development experience, skilled in building high-performance, memory-efficient code and optimizing complex architectures. Proven team lead with a track record of improving workflows, integrating AI tools, and delivering reliable, low-latency solutions. Background includes robotics, machine learning, and applied algorithms, with strong analytical problem-solving and communication skills suited for quantitative engineering environments.

PROFESSIONAL EXPERIENCE

DreamWorld **Santa Clara, CA**
LEAD SOFTWARE ENGINEER *October 2022 – Present*

- Implemented and designed classes and features efficiently through our custom C++ framework and the Unreal Engine.
- Improved codebase for performance, legibility, and memory efficiency, drastically reducing hitching across the board.
- Trained, mentored, and managed over 10 junior software developers, assigned and led through project development.
- Converted our entire team to a new task management strategy, greatly increasing productivity across the board.
- Applied and automated version control to testing cycles and updates to production servers.
- Led team into integrating every day AI use tools to improve team efficiency in development and debugging.
- Restructured client sided message handling for predictive tick based allowance based on MS allowance parameters.
- Built fullstack metrics dashboard for external investor use through internal data, AWS, Python, and Power BI.

137 Ventures **San Francisco, CA**
CLIENT OUTREACH ASSISTANT *August 2019 – November 2019*

- Delivered excel spreadsheets of relevant companies and officers in assigned fields, with all pertinent information.
- Researched and collaborated in the blockchain ecosystem to inform direction of future interest.

PROJECTS

Black-Scholes Model Visualizer *November 2025 – Current*

- Implemented an exact output of the Black-Scholes financial put and call model in Python.
- Used the Python Streamlit API to allow for realtime interaction and parameterization with a heatmap visualization.
- Integrated current company stock price and calculated yearly volatility based on accurate data using yFinance API.

Autonomous Robot Project *September 2021 – May 2022*

- Designed and implemented a mobile autonomous robot to work cooperatively in an industrial kitchen environment.
- Wrote fullstack architecture for a 'Follow the Leader' mode in the ROS architecture using C, Python, and Arduino.
- Awarded Best in Session for high quality work, safety research, and presentation by a panel of professional judges.
- Implemented and tested accuracy of positioning systems using Pozyx devices to within 5cm of expected position.

Neural Style Transfer Project *September 2021 – May 2022*

- Reverse engineered and built a neural style transfer of images originating from diverging image contents and style.
- Created a Convolutional Neural Net using the ImageNet database to train outputs with unique style and content.

EDUCATION

Santa Clara University, School of Engineering **Santa Clara, CA**
B.S. in Computer Science & Engineering, Concentrations in AI & Algorithms *May 2022*

Courses: Machine Learning/Data Mining, Computer Architecture, Compilers, Computer Networks, Artificial Intelligence, Theory of Algorithms, OO Programming & Data Structures, Engineering Communications, Chaos Theory & Metamathematics.

Activities: Co-founder of Santa Clara Startup Club, Kappa Sigma Fraternity Chairman, Member of the Order of the Engineer.

Sacred Heart Preparatory **Atherton, CA**
High School Diploma *June 2018*

SKILLS & INTERESTS

Technical Software: Unreal Engine 5, Power BI, AWS, Google API, Streamlit, Numpy, Pandas, ROS, Git, Linux
Languages: C, C++, Python, Java, React Native, DAX, Go, SQL, Verilog, Arduino
Interests: Indoor & Beach Volleyball, Reading, Puppy Rearing, Strength Training, Golf, Video Games, Mediocre Trivia
